

2PBABent Axis Piston Pump

2PBA Pumps have the following advantages;

- Compact Design,
- Economical Conception,
- High Power Density,
- High Overall Efficiency,
- High Rotating Speeds,
- High Output Pressure,
- 400 bar Peak Pressure,
- From 5cc to 130cc,
- · Reduced Noise Level,
- Increased Reliability,
- No Drain Line Necessary,
- 140 Diam Emericessary,
- Smaller Installation Dimensions,One Piece Pistons with Piston Rings,
- 350 bar Cont. Work. Pressure, Special Inlet Fittings & Accesories,
 - Simple Change of Direction of Rotation

Other Advantages of 2PBA

New frame sizes to meet market requirements.

Optional by-pass valve.

For use in mobile & industrial and stationary applications areas.

The pump drive shaft bearings are designed to give the service life expected in these areas of operation.

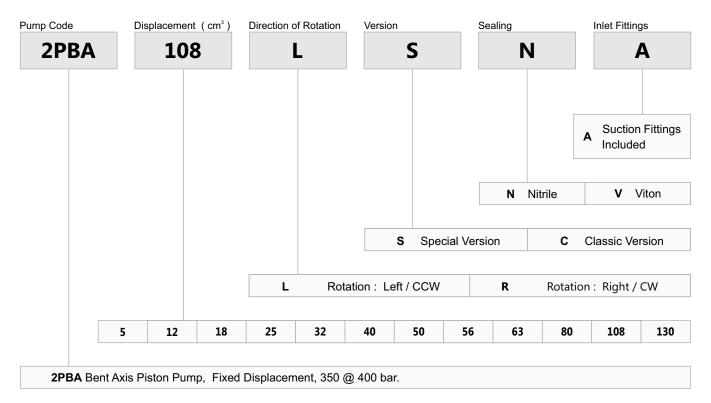

Interchangeable with other bent axis pumps.

40° bent axis design giving high power, small overall dimensions, optimum efficiency and economic design. Flange and shaft designed for direct mounting on truck gearbox PTO's. The fixed displacement bent axis pumps generates a hydraulic fluid flow. It is designed for use in trucks, commercial vehicles and all stationary hydraulic applications. The 2PBA is a fixed pump with rotary group in bent-axis design open circuits. Flow is proportional to drive speed and displacement.

For axial piston units with bent-axis design, the Pistons are arranged diagonally with respect to the drive shaft. The pump covers the whole displacement range 5 to 130 cm3/rev. The pump has been developed with modern styling and design to satisfy market demand as to designed new generation plate and pistons with give high flow performance, high pressures with high efficiency and very small dimensions.

The pump is available both to DIN and SAE world standards and can be mounted either directly at the gear box or via a drive shaft. If necessary it can also be augmented with a by-pass valve. Other brand bent axis pumps compatible and interchangeable with 2PBA bent axis pumps. Refer to the data sheet and order confirmation for the technical data, operating conditions and operating limits of the bent axis piston pumps.

Ordering Code of 2PBA Pumps

Special Version; BRONZE EDITION

Formulas					
Pump Output Flow	GPM	GPM = (Speed (rpm) × disp. (cu. in.)) / 231	GPM = (n ×d) / 231		
Pump Input Horsepower	НР	HP = GPM × Pressure (psi) / 1714 × Efficiency	HP = (Q ×P) / 1714 × E		
Pump Efficiency		Overall Efficiency = Output HP / Input HP	Eoverall = HPOut / HPIn X 100		
Pump Efficiency	E	Overall Efficiency = Volumetric Eff. × Mechanical Eff.	EOverall = EffVol. × EffMech.		
Pump Volumetric Efficiency	E	Volumetric Efficiency = Actual Flow Rate Output (GPM) / Theoretical Flow Rate Output (GPM) × 100	EffVol. = QAct. / QTheo. X 100		
Pump Mechanical Efficiency	E	Mechanical Efficiency = Theoretical Torque to Drive / Actual Torque to Drive × 100	EffMech = TTheo. / TAct. × 100		
Pump Displacement	CIPR	Dsplcmnt (In.3 / rev.) = Flow Rate (GPM) × 231 / Pump RPM	CIPR = GPM × 231 / RPM		
Pump Torquo		Torque = Horsepower × 63025 / RPM	T = 63025 × HP / RPM		
Pump Torque	Т	Torque = Pressure (PSIG) × Pump Displacement (CIPR) / 2π	T = P × CIPR / 6.28		

Horsepower for driving a pump

: For every 1 hp of drive, the equivalent of 1 gpm @ 1500 psi can be produced.

Horsepower for idling a pump

: To idle a pump when it is unloaded will require about 5% of it's full rated power

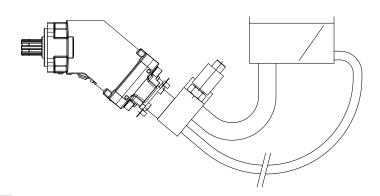

Wattage for heating hydraulic oil : Each watt will raise the temperature of 1 gallon of oil by 1° F. per hour.

Flow velocity in hydraulic lines

: Pump suction lines 2 to 4 feet per second, pressure lines up to 500 psi - 10 to 15 ft./sec., pressure lines 500 to 3000 psi - 15 to 20 ft./sec.; all oil lines in air-over-oil systems; 4 ft./sec.

Changing the Direction of Rotation

!! CHECK THE ROTATION FROM THE POWER TAKE OFF

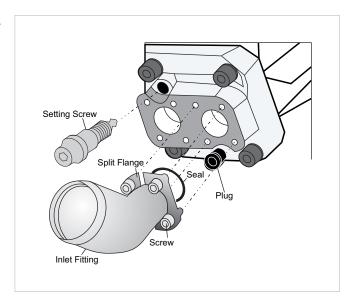

!! THE ROTATION DIRECTION OF THE PUMP

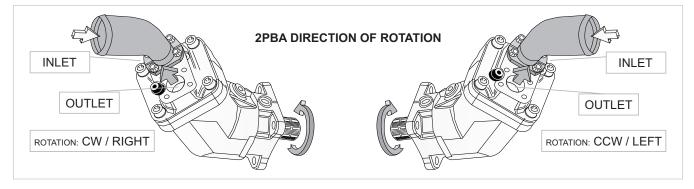

Left Right

Default delivered. Change rotation.

HOW TO CHANGE ROTATION OF THE 2PBA PUMP;

- Remove the inlet fitting with split flange,
- Remove the setting screw,
- Remove the plug,
- Put the setting screw where the plug was,
- Put the plug where the setting screw was,
- Put seal on the inlet fitting, then the inlet fitting on the side where the plug is, and fix with the split flange, Tighten with the screws.

NOTE I

The Inlet Fitting is pre-assembled on delivery and must be tightened to the torque specified for the thread size before installation.

NOTE II

To change the direction of rotation of the 2PBA Bent Axis Pump, you must change the pressure connection from to right port to the left port.

NOTE III

If the pump drive shaft moves while making the change, the 2PBA Bent Axis Pump may be damaged.

After unscrewing the pressure connection, do not turn the drive shaft of the pump!

FLUID

Please check the following recommendations: Mineral oil

Viscosity 20 to 40 cSt
Min. viscosity 5 cSt
Viscosity for correct operation
Recommended filtration 10 u absolute

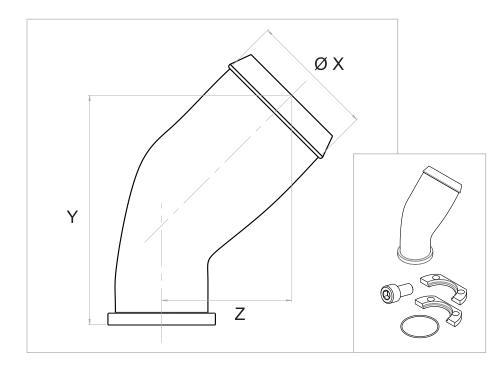

10 to 400 cSt 10µ absolute class 9 NAS 1638

class 6 SAE class 18/15 ISO

Max temp.

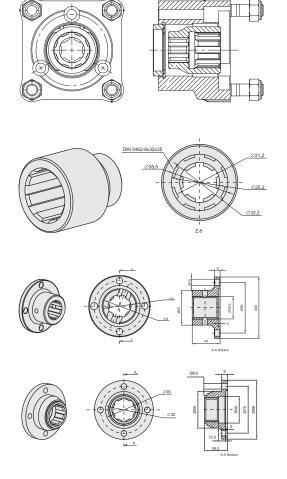

100° C

Inlet Fittings, Accessories

Inlet Fittings & Installation Parts

- Split Flange
- Seal
- Screw

By-Pass Valves

- 12 V
- 24 V

Hydraulic Adapters

- PTO Piston Pump Adapter
- PTO Gear Pump Adapter
- Long / Short Adapter

Flanges

- 1120 (6 Spline)
- 1120 (8 Spline)
- 1300 (6 Spline)
- 1300 (8 Spline)

Couplars

- 6 x 8 Couplar
- 6 x 8 Couplar (Long)
- 8 x 8 Couplar
- 8 x 8 Couplar (Long)

Installation & User Guide

The 2PBA pumps fitted with a rubber front seal.

INSTALLATION

2PBA pumps are direct mounting on the PTO.

Grease the splined shaft before installation. Do not tap the gear wheel/driver into position.

Remove any mounted screws on the pump.

The 2PBA was delivered with protective covers and plastic/threaded plugs.

It should be removed before of install. Please check seals and surfaces. If sealing or other surfaces damaged please contact your responsible Service Partner.

Start up and run the pump at medium speed (800 to 1000 rpm at the PTO) until the oil flowing out of the pump. (There are no more air bubbles.)

OIL SUPPLY

Oil and supply line should be clean, and the supply line is airtight.

SUCTION LINE

Connect the suction line, tighten the suction connection bolts in diametric pairs.

Connect the pressure line.

RFPAIR

We offers a comprehensive range of services for the repair of our Bent Axis Pumps.

Repairs to the 2PBA Bent Axis Pump may only be performed by authorized, skilled and instructed personnel.

Only use original and pre-installed our 2PBA spare parts from supplied to Manufacturer..

Tested and pre-installed 2PBA pumps successful repair requiring only little time.

SPARE PARTS

The spare parts list and the 2PBA pump order specific.

When ordering spare parts, quote the material and complete Ordering code number of the 2PBA Bent Axis Pump as well as the right numbers of the spare parts.

RISK OF DAMAGE!

Do not touch the drive shaft of the 2PBA Bent Axis Pump Do not touch sensor, valves and fittings Do not touch sealing surfaces.
